

CSS (Part 3)

Practice Solutions

Ans 1

Inside HTML, create

```
<div id="box">My Box</div>
```

Inside CSS, write

```
#box {
  height: 150px;
  width: 300px;
  background-color: grey;
  border: 5px dotted black;
  margin: 20px 1em 40px 2em;
  padding: 1em;
}
```

Ans 2

Inside HTML, create

```
<div class="box"></div>
<div class="box"></div>
<div class="box"></div>
```

Inside CSS, write

```
.box {
```

```
height: 100px;
width: 100px;
background-color: pink;
border: 2px solid black;
border-radius: 50%;
display: inline-block;
}
```

Ans 3 Inside HTML, create

Inside CSS, write

```
li {
  display: inline;
}
```

Li (list items) have their display property set to "list-item" by default which makes them a bulleted list item.

When this property is reset by you to "inline", then the bullet points also disappear. In a way, we override the default settings with our CSS.
